Final Report

(a) Write a final report for the project. The report should

- o contain all the content and findings in the previous stages
- o take into account my feedback at every stage
- o communicate your findings in a well-structured and engaging written form
- o discuss what you have learned (if anything) from applying probability to your research question
- o length is 5-7 pages (if you work alone) or 10-12 (if you work in groups of 2-3)

(b) Attach to the report itself what you handed in to me for the previous stages along with my written comments, criticisms and suggestions.

(c) Describe in one or two pages how you have addressed my comments, criticisms and suggestions.
